

Testimonials

I had a fantastic experience during my elective. I was able to learn a lot more about what palliative care involves and was able to spend time in the entire breadth of the service.

A wonderful department to do an elective. Everyone is very friendly, welcoming and willing to teach.

Everyone in the department was very approachable and I could tell they were all very student minded. I got a good mix of teaching and clinical exposure, and it was exactly what I wanted!

I could not recommend this elective placement highly enough to any future prospective elective medical students. I thoroughly enjoyed every day of this placement and looked forward to coming in each morning.

I have had a fantastic time on the Breast Unit. I have long held the desire to pursue a career in surgery yet had never considered Breast as a specialty. I found it to be a rewarding and interesting specialty that makes a fantastic difference to patients' lives. I would encourage anyone with an interest in surgery to consider this elective, the team is welcoming and close knit and more than happy to have students.

When I start my ITU job in my second rotation as a foundation doctor I feel that I am going to be incredibly well prepared. This placement has improved my knowledge, experience and confidence in the ITU environment. It has also focussed me on a future career in anaesthetics
